

COMPANY & SERVICES PROFILE · 2026

AI systems built around how your business actually works, and the **skills** to run them yourself.

Smart AI Solutions is a Cape Town practice that investigates how a business really operates, embeds AI where it earns its place, and then trains the people who have to live with it. Two arms, one standard: **build it properly, then hand over the keys.**

11

AI and automation service lines, from embedded developers to AI search visibility

10

Sessions in our AI education programme, covering 30+ AI tools hands-on

ZA

Cape Town head office, serving businesses across South Africa

BUSINESS SOLUTIONS

Embedded AI developers, systems integration, chatbots and assistants, process automation, predictive analytics, CRM and WhatsApp automation, reporting, logistics AI and AI search visibility.

EDUCATION

Live two-day AI intensives online and in person, a ten-session transformation track, company-wide adoption programmes and AI strategy for leadership teams.

Loxly Atkinson

FOUNDER · SMART AI SOLUTIONS · CAPE TOWN

I am not a consultant who read about business. I sold and implemented point-of-sale systems into the South African trade for three years, so I know what a real shop floor looks like on a Saturday. Then I spent six years building the software that fixes what POS was never going to solve.

Before I wrote a line of AI code I spent three years as **Business Development Manager at IQ Retail's POS division** in Stellenbosch, running multi-client implementations and training partners across the reseller network. Before that I was **Regional Manager at Corex Partnertech**, the ICT distributor, working with resellers, service providers and managed service providers. Two promotions in four years.

In 2020 I left, because I had seen the gap from the inside. I had spent years watching businesses fight the same problems that a till system was never going to solve. Not stock counting. Customers. Follow-up. The hundred small conversations a day that nobody has time for. The tools to fix that did not exist yet, so I went and built them.

2013 to 2017

Regional Manager

Corex Partnertech · ICT distribution. Resellers, service providers and MSPs. Two promotions.

2017 to 2020

Business Development Manager

IQ Retail, POS Division, Stellenbosch. Multi-client implementations and partner training.

2020 to now

Founder

Smart AI Solutions. Live production systems across education, retail, radio, medical, property and print.

What I actually do

- **WhatsApp sales and customer engagement.** This is where South African business actually happens. In-chat ordering, payment links, live stock answers, follow-up that runs itself.
- **AI training for your team.** I spent three years training POS partners on new systems. Same job, new tools. Your staff using AI properly, on your actual work.
- **Custom builds.** CRM, dashboards, automation, integrations. If it does not exist, I build it. If it exists but does not fit, I build it anyway.
- **AI audits.** I look at how you actually run and tell you the two or three places AI pays for itself first. No commitment beyond that.

How I work

- **Hands-on with every deliverable.** When you hire me you get me, not a junior with my logo on their email.
- **I ship live infrastructure, not decks.** Everything I have built is running and I will walk you through any of it.
- **I sell what I can build.** Which is why my scopes hold.
- **POPIA-conscious from the first line.** It is your customer data and it is your problem if it leaks.
- **Python and TypeScript on Supabase,** wired into Claude, Gemini and OpenAI. If none of that means anything to you, good. It should not have to.

The short version. Three years inside the POS trade watching businesses lose money in the same four places. Six years building the systems that close those gaps. Every one of them scoped, built, deployed and maintained personally, including a WhatsApp platform built for a teachers' union and a sixteen-module broadcast console that runs a regional radio station's entire on-air operation.

WHO WE ARE

Investigation first. Implementation second.

Most AI projects fail because they start with a tool. We start with the business system: your SOPs, data flows, sales process, support channels, and the manual work your team repeats every week. Then we build AI into the systems you already run, and leave your people more capable than we found them.

Our story

Smart AI Solutions was founded on a simple observation: South African businesses did not need another AI vendor. They needed a partner who would look under the bonnet first.

The practice grew out of years spent inside the IT distribution and point-of-sale trade, where the founders watched good businesses buy good software and still lose money in the gaps between systems. Today we work across education, broadcasting, property, retail, healthcare, professional services and logistics.

Leadership

- **Loxly Atkinson, Founder.** AI and automation engineering, systems architecture, WhatsApp-native platforms. Previously Business Development Manager at IQ Retail's POS division and Regional Manager at Corex Partnertech.
- **Barend Geldenhuys, Chief Operating Officer.** Eighteen-plus years in IT, including ten years at Rectron in sales and account management, and Branch Manager level at Corex IT Distribution. Negotiation, business development and client relationships.

What we stand for

Investigation-first We diagnose before we recommend. No tool goes in until we know what it is replacing.	Embedded partnership We work inside the business as part of the team, not as an agency ticket queue.	Capability, not dependency When we step back your people should be stronger, not more reliant on us.	South African context POPIA-aware design, load-shedding resilience, same timezone, local platforms.
--	--	--	---

How an engagement runs

01 Discovery and audit We map current workflows, systems, customer journeys, data sources and bottlenecks, and find where AI creates fast, measurable value.	02 Prioritised roadmap We choose the highest-return use cases first, define success metrics, and agree what gets automated, what gets assisted, and what stays human.	03 Embedded build We build with your tools and your team. You see progress in working systems, not slide decks.	04 Measure and improve We track time saved, response times, errors reduced and lead handling, so the solution keeps improving after launch.
--	---	---	---

Serving nationwide. Cape Town head office, with clients in Johannesburg, Sandton, Pretoria, Centurion, Durban, Stellenbosch and Port Elizabeth. Remote-first delivery, same timezone, same working week.

CORE SERVICE LINES

Build the capability. Then build the systems.

Six foundational service lines. Take one focused project, or work with an embedded AI partner across your whole stack.

CORE

AI Developer Rental

A dedicated AI developer embedded in your team on a flexible monthly basis. Someone who learns your business before building anything in it.

- No recruitment overhead, no three-to-six-month hiring cycle
- Junior, mid-level and senior seniority available
- Python, OpenAI, LangChain, n8n and a wide AI toolchain
- Scale monthly, with knowledge transfer built into the engagement

CORE

AI Team Enablement

Practical training built on your actual tools, processes and industry context, so capability stays in the building when we step back.

- Custom curriculum around your real workflows, not generic theory
- Hands-on workshops covering three to five practical workflows
- Segmented by skill level so nobody is bored or lost
- Post-training support window with live question sessions

CORE

AI Integration Services

We investigate your ERP, CRM, accounting software, POS and custom applications, then connect AI where it matters. Nothing gets ripped out.

- No rip-and-replace: existing systems stay intact
- Secure API connections with a structured security review
- Custom middleware for South African platforms
- Salesforce, SAP, Sage, Microsoft Dynamics, Shopify, WooCommerce and custom databases

AI SOLUTIONS

AI Chatbots & Assistants

Assistants trained on your actual customer conversations, not a generic template. Website, WhatsApp, social and internal.

- One dashboard across WhatsApp, website, Facebook, Instagram and email
- Understands context, slang and multiple languages including Afrikaans, Zulu and Xhosa
- Smart escalation that hands a human the full conversation history
- Lead qualification, appointment booking and CRM hand-off

AI SOLUTIONS

Process Automation

We map your workflows first, then automate the ones that free your team to do work worth doing.

- Workflow mapping to find where time and errors accumulate
- Built on n8n, Make.com and Zapier, or custom where needed
- Most clients self-manage their automations after handover
- Real-time monitoring dashboards and ongoing support

AI SOLUTIONS

Predictive Analytics

Most businesses already hold the data they need to forecast. We assess what you have, then build from there.

- Sales and pipeline forecasting for planning cycles
- Customer churn signals ahead of departure
- Demand prediction to cut stockouts and overstock
- Plain-language dashboards with actionable alerts

APPLIED SERVICE LINES

Where AI meets revenue and operations.

Five service lines aimed at the parts of the business that either bring money in or quietly leak it out.

REVENUE

CRM & Sales Automation

We audit your pipeline, find the three to five places deals stall, and plug those specific gaps with AI.

- AI lead scoring so the team works the best opportunities first
- Automated follow-up sequences that fire at the right moment
- Pipeline intelligence: deal health, stalled opportunities, forecasts
- Salesforce, HubSpot, Zoho, Pipedrive, Freshsales and custom CRMs

REVENUE

WhatsApp Business Automation

POPIA-compliant WhatsApp automation designed around how your customers already message you, because in South Africa, that is where the conversation happens.

- Conversation flows built from your real enquiry patterns
- Rich media: catalogues, PDFs, images, location pins, interactive buttons
- After-hours resolution without a human on standby
- Connected to CRM, payment gateways and booking systems

OPERATIONS

Data Analytics & Reporting

Most dashboards fail because they were built before anyone asked which decisions they needed to support. We ask first.

- One consolidated view across separate data sources
- Daily, weekly or monthly reports delivered automatically
- Custom KPIs mapped to actual strategic objectives
- Drill-down dashboards with mobile access

OPERATIONS

Operations & Logistics AI

No two operations are the same. We map your route patterns, staffing constraints, inventory rhythms and the workarounds your team has quietly invented.

- Route optimisation for fuel and time
- Demand forecasting to smooth stock holding
- Scheduling AI for staff, vehicles and resources
- Real-time tracking of deliveries, inventory and operational KPIs

NEW · VISIBILITY

GEO: AI Search Visibility

Traditional SEO gets you ranked in Google's blue links. Generative Engine Optimisation gets you *cited*, named as the answer inside ChatGPT, Perplexity, Google AI Overviews and Gemini, where a growing share of buying research now starts.

- AI crawler configuration: robots.txt for ChatGPT, Perplexity and ClaudeBot, plus a maintained llms.txt
- Structured data: Organization, Service, FAQPage, Article and BreadcrumbList schema
- Content citability: answer-block formatting and expertise signals
- Brand authority across cross-platform mentions and industry directories
- Platform-specific strategy per AI engine
- Monthly visibility reporting: GEO score, citation frequency, competitive position

START FREE · THEN CHOOSE YOUR DEPTH

Audits, reports and partnership models.

You do not have to commit to find out whether AI is worth it in your business. Start with a free diagnostic, take a one-off report, or move into an ongoing partnership.

Free diagnostics

FREE

AI Visibility Audit

Enter your website and get a 0 to 100 GEO score across five signals, returned as a branded report showing how visible you are to ChatGPT, Perplexity and Google AI.

FREE

AI Readiness Assessment

A short questionnaire that returns a readiness score, an opportunity map and the services that would move the needle first.

FREE

AI Savings Calculator

Two minutes to an annual savings projection and payback period for automating the manual work your team repeats.

Done-for-you reports

GEO & SEO Deep Audit

Generative-engine, on-page and technical examination, delivered as a prioritised fix list.

AI Citation Report

Whether ChatGPT, Perplexity and Gemini cite you for your buyers' prompts, plus competitor gaps.

Backlink Snapshot

Link profile tracking with week-over-week change reports and an opportunity list.

Website Intelligence

GEO, technical audit, citations, backlinks and competitor benchmarking in one document.

Ongoing partnership models

Foundation Partner

FIRST STEPS

- An AI specialist embedded in your team, part-time each week
- We investigate and implement your first three high-impact workflows
- One system integration
- Dedicated email support
- Monthly strategy call to map the next opportunities

Growth Partner

MOST POPULAR

- A full-time AI developer embedded as part of your team
- Up to five systems investigated and connected so data flows
- Priority phone support with a defined response SLA
- Weekly strategy calls
- Your own project manager handling coordination

Enterprise Partner

FULL AI-READINESS

- An embedded AI team working inside your business
- Every system in your stack investigated and integrated
- Enterprise-grade security and compliance
- Round-the-clock priority support
- Strategic roadmap plus change management

Also available: Managed AI-Visibility as an ongoing retainer, on-brand content and copy generation, and a founder-led Full AI Transformation programme spanning strategy through execution, including IT infrastructure support. **Current rates for every service are quoted on request.**

EDUCATION

The fastest way to make AI real is to teach the people who use it.

Smart AI Solutions Education is our training arm. Live, guided, hands-on programmes that take people from cautious to capable, and give organisations a route from AI awareness to AI that is actually part of the working week.

What makes it different

- **Live and guided, never a video library.** Every session is delivered in real time with demonstrations, guided activities and open question time.
- **Hands-on from session one.** Delegates work in the tools on their own laptop, on their own real tasks, not on a case study about someone else's business.
- **Built by practitioners.** The people teaching it build production AI systems for a living, so the advice survives contact with a real workday.
- **South African context.** POPIA, the national AI policy landscape, local tooling and local business realities are part of the syllabus, not a footnote.

Who it is for

- **The complete beginner.** You have read the headlines, never really used AI, and you are worried you have missed the boat. You have not.
- **The dabbler.** You have played with ChatGPT for the odd task and sense it can do far more. You just do not know how to get there.
- **The regular user.** You are already the AI person on your team. You want sharper prompting and a proper grip on the newest capability.
- **The builder.** You are curious about what comes after prompting: automation, AI-assisted coding, apps and agents. You do not need to be a developer.

No age limit, no grade requirement, no prerequisites. Bring a laptop and a real task you want to get off your desk.

What delegates leave with

01

A working prompt library

Reusable prompts and frameworks built around your own role, in your own brand voice.

02

A personal adoption plan

Your current workflows mapped, with the specific points where AI takes work off you.

03

Hands-on tool fluency

Thirty-plus AI platforms across writing, research, design, video, marketing and building.

04

Ongoing community access

Alumni sessions, events and a place to share what worked and what did not.

Start with a free hour. Our 60-minute AI Showcase is a live, free session that demonstrates what AI can do end to end: one idea turned into research, copy, visuals and video in real time. It is the honest way to find out whether the full programme is for you. A recording is available if you cannot attend live.

PROGRAMMES

Five ways in.

The same ten-session curriculum, delivered in the format that fits how your people actually learn, plus two organisation-wide programmes for teams and leadership.

Two-Day AI Intensive Online

INDIVIDUALS & SMALL TEAMS

- All ten sessions, live over two consecutive days
- Delivered by video conference, join from anywhere
- Live question time in every session
- Full resource library: templates, guides and prompt packs
- Networking with the rest of the cohort
- Alumni community access afterwards

Two-Day AI Intensive In Person

THE FULL EXPERIENCE

- Identical ten-session curriculum, face to face
- Hosted at conference venues in major South African centres
- Longer contact hours than the online format
- Catering included; bring your laptop
- Everything in the online programme
- Room-level help while you work in the tools

Ten-Session Transformation Track

PACED DELIVERY

- The same ten sessions, spread over a longer schedule
- Part one, discovering AI: sessions one to five
- Part two, building with AI: sessions six to ten
- Suited to teams who cannot lose two full days
- Same resources, same alumni access

Company AI Adoption

FOR HR, L&D AND DEPARTMENT HEADS

- We begin by listening: leadership discussions, discovery workshops and practical collaboration to find where AI creates genuine value rather than new complexity
- Practical training, workflow workshops and working sessions where AI solutions are co-created alongside your team
- We build prompt libraries, AI-supported workflows, agents, reporting processes and responsible-use guidelines
- Applied to the tools you already run, including ChatGPT, Microsoft Copilot and Claude
- Flexible formats: recurring weekly sessions or a fully customised adoption programme
- Support continues after the workshops, until AI is part of how the organisation works

AI Strategy & Change Management

FOR LEADERSHIP AND EXCO

- Moves the organisation beyond isolated AI experiments to one clear, business-wide direction
- Executive discovery sessions and AI readiness assessment
- Opportunity mapping, governance guidance and implementation planning
- Clarifies where AI creates value, what risks need managing, and how people, workflows and priorities will be affected
- Supports the human side: building trust, addressing uncertainty and communicating clearly with staff
- Ends with a practical roadmap the leadership team owns

Also included at no charge: a free 60-minute AI Showcase before you commit, a free AI assessment to establish your starting point, and ongoing alumni community access once you have completed a programme. **Programme fees and scheduled dates are quoted on request.**

SUBJECTS WE COVER

Ten sessions, from “what is AI” to building agents.

Every programme runs the same ten-session curriculum. Sessions one to five build the foundation; six to ten turn it into output.

- 1 AI in Action**
 A live demonstration where one idea becomes research, marketing copy, social posts, a blog, a website, a video, a presentation and an infographic, in front of you, in real time.
- 2 AI Foundations**
 How we got here, the difference between narrow and general AI, machine learning, deep learning and natural language processing, how large language models are trained, and why training data shapes everything.
- 3 Prompt Engineering**
 The single skill that multiplies every other tool. Structured prompting frameworks, cross-prompting between models, extracting and encoding your brand voice, and the interview technique that gets AI to draw ideas out of you.
- 4 Privacy, Ethics, POPIA and Risk**
 What never to paste into a public AI tool, what free tools do with your inputs, bias and accountability, how POPIA and the national AI policy framework apply, and how to draft an AI use policy for your business.
- 5 Advanced ChatGPT & LLM Workflows**
 Beyond chatting: personas and custom instructions, custom GPTs, projects, voice, canvas and connectors, deep research, working across Excel and documents, and when to reach for a different model instead.
- 6 AI at Work & Your Adoption Plan**
 Mapping your current workflows, finding your leverage points, and writing a personal adoption plan you can start on Monday. Includes Microsoft Copilot across Word, Excel, Outlook, PowerPoint and the browser.
- 7 AI Design & Video Production**
 Generating and editing graphics, social and campaign collateral, image generation from text, video generation and editing, animated characters, AI voiceover and AI music, then final assembly.
- 8 AI-Powered Marketing**
 Deep market and competitor research, audience and persona prompts, a month of social content from a single structured prompt, content calendars, cross-platform repurposing, lead discovery, and writing for both humans and AI search.
- 9 Building With AI**
 Websites and web apps generated from prompts, AI-assisted code, no-code and low-code build tools, and the real difference between a language model, an automation and an autonomous agent.
- 10 Certification Paths & What Next**
 Where to pursue recognised international AI certification, the resource hubs worth following in a field that moves weekly, your full resource pack, and entry into the alumni community.

Platforms and tools covered hands-on

ChatGPT	Claude	Google Gemini	Microsoft Copilot	NotebookLM	Google AI Studio	Google Analytics		
Gamma	Canva	Adobe Firefly	Adobe Express	Photoshop	Illustrator	After Effects	Midjourney	
Kling AI	InVideo	ElevenLabs	Suno	CapCut	Napkin	Blaze	Ocean.io	Lovable
Hostinger Horizons	WordPress	Vectorshift	Word	Excel	Outlook	PowerPoint	Google Drive	

SELECTED WORK

Live systems, not pilots.

Every system below is running in production. We will walk you through any of them.

EDUCATION · TEACHERS' UNION

NAPTOSA

A multi-tenant, WhatsApp-native member platform built for a teachers' union. Unified inbox and contacts, legal casework management, multi-platform communications, and an AI command centre running the union's chatbot operations. Built on Supabase with edge functions handling live conversation at volume.

BROADCASTING · COMMUNITY RADIO

Eden FM

A sixteen-module presenter console covering the station's whole operation: live on-air controls, listener requests arriving over WhatsApp with automatic read receipts and priority ranking, per-town weather and radar, news bulletins in Afrikaans, English and Xhosa, content scheduling, and an in-console recording studio for advertiser proof of play.

Sectors we work across

Education & unions

Broadcasting & radio

Retail & e-commerce

IT & licensing

Real estate

Healthcare

Financial services

Legal

Logistics & transport

Hospitality & tourism

Manufacturing

Construction

Agriculture

Mining & energy
